

## **Brigham City Building Permit Submittal Requirements**

The items listed below must be provided to the City when turning in plans for Building Permits. All items must be addressed or checked off in the box provided and then signed by the contractor, indicating that all required documentation has been provided. Any missing items may cause a delay in processing the application. This sheet must be returned when submitting.

Seismic Zone D2 for residential and Seismic Zone D for commercial structures. Wind speed is 90 and exposure C, frost depth is 30". Ground snow load is 43 psf and roof snow loads are 30 psf. Plans must be wet stamped and signed by the engineer, copies may be denied, also if the engineering packet references a different city and subdivision they will be denied.  Building Permit application  The application must be complete when submitting. The General Contractor, Electrical Contractor, Plumbing Contractor, Mechanical Contractor, (including contractor license number), valuation and signature section must be complete.  Pre-Pay Requirements  When submitting for a building permit a \$100.00 pre-pay is required for all commercial projects and new SFD's. A \$27.75 pre-pay is required for all other permits. The pre-pay is non-	Signat	ture: Date:							
<ul> <li>Plot plan- showing the location and distances on the property from property lines (and existing structures if applicable) that the structure will be built.</li> <li>Elevation Drawings- include all four sides for new construction and partial views for additions and remodels</li> <li>Wall sections- these typically are one of the most important drawings to the Inspection Department during the review process. Please ensure that the drawings are clear and complete. Most applications that are returned to the contractor are due to incomplete wall sections.</li> <li>Floor Plans- of each level. Plumbing, Mechanical, Gas line &amp; Venting Diagram and Electrical plans must also be included.</li> <li>Res or Comm-Check- showing compliance with the 2006 IECC.</li> <li>Engineering- 2006 International Codes  Due to the complexity of structures being built and the increasing structural requirements imposed by the Building Codes engineering is required for almost every structure being built. Seismic Zone D2 for residential and Seismic Zone D for commercial structures. Wind speed is 90 and exposure C, frost depth is 30". Ground snow load is 43 psf and roof snow loads are 30 psf.
